

What do you envision as useful results?

Round Table/Discussion

Dr. Grégory Maclair

Cosine6

How do you imagine a DSS system for BUs?

What can provide image, genetic, patient life style, etc.. data to treatment and decision support?

Is medicine ready to assume a new paradigm based on data and not on hypothesis?

Until what extent will you rely on a decision support system based on experience?

Until what extent a DSS based on evidence and experience fits with BUs workflow in the real life?

Thank you for your attention
